## **DETAILED ACTION**

### ***Election/Restrictions***

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

1. Cell type to be administered to tissue or organ of a mammal in need thereof. The different cell types are listed in claims 1 and 18.

2. Cell type to be further administered to the tissue or organ of the mammal in need thereof. The different cell types are listed in claims 7 and 22.

3. Tissue or organ. The different species are listed in claims 15 and 25.

Applicant is required, in reply to this action, to elect a single species from EACH of the THREE (3) groups above to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The following claim(s) are generic: 1 and 18.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: Pursuant to PCT Rule 13.2 and PCT Administrative Instructions, Annex B, Part 1(f)(I)(B)(2), the species are not art recognized equivalents, each of the cell types listed in **1** and **2** have distinct characteristics and properties, and thus would have different, non-obvious effects upon delivery to an organ or tissue. Furthermore, the different tissues and organs listed in **3** consist of distinct cell types, and have unique microvascular systems; depending upon the selected tissue or organ species, different considerations as far as cell type and amount would be necessary to determine appropriate treatment parameters. Therefore, the species listed above in groups **1**, **2** and **3** claim non-obvious variants of the generic invention, and methods involving a particular combination of cell types for delivery to a particular organ or tissue would not render the other combinations obvious.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of

Art Unit: 1651

inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
